Declaration of Generative AI Use

Student Name: He Ningqiu

Student ID: p2625633

Assignment: Assignment One - Developing a Multi-Database Search Strategy Based on PICOS

Declaration

I declare that I used OpenAI Codex as a supporting generative artificial intelligence tool while preparing this assignment. It was used to: (1) assist with interpreting the assignment instructions; (2) help organize the PICOS concepts, preliminary search terms, and database-specific presentation of the search strategies; (3) translate the report from Chinese into English; and (4) improve the organization, grammar, and clarity of the written report.

I personally accessed the database platforms, entered and ran the searches where access was available, captured the screenshots, and checked the reported search settings and result counts against the actual searches. Where institutional access to CINAHL and the Web of Science Core Collection was unavailable, this limitation was stated in the assignment and supported by screenshots. No result counts were invented for databases that could not be searched.

I have reviewed the final assignment and take responsibility for the accuracy of its contents, the appropriate acknowledgement of generative AI assistance, and compliance with academic integrity requirements.

By signing below, I confirm that the information in this declaration is complete and accurate.
