REVIEW TITLE AND BASIC DETAILS

Review title
A network meta-analysis of non-pharmacological interventions for improving sleep quality in adolescents with bipolar disorder.

Review type
Standard

Condition or domain being studied
Bipolar Disorder; Sleep disturbances; Adolescence; Insomnia

Bipolar disorderBipolar disorder (also known as manic-depressive illness) and sleep disturbances

Rationale for the review
1. Clinical Importance: Sleep disturbances are highly prevalent among adolescents with bipolar disorder (BD) and are associated with significant adverse consequences, including mood instability and increased risk of relapse.

2. Evidence Gap: Currently, there is a lack of a network meta-analysis that specifically compares the efficacy of different non-pharmacological interventions for this population.

3. Study Necessity: This study aims to fill this gap by synthesizing the available evidence to inform clinical decision-making and identify the most effective intervention strategies.

4. Holistic Benefits: Effectively improving sleep quality is expected to not only alleviate core symptoms but also support healthy physical and psychological development in adolescents.

5. Functional Outcomes: Furthermore, better sleep may help minimize disruptions to their academic pursuits and overall daily functioning, contributing to a better quality of life.

Review objectives
rimary objective:To compare and rank the efficacy of various non-pharmacological interventions (e.g., mindfulness, music therapy, aromatherapy) for improving sleep quality in adolescents with bipolar disorder.

Secondary objective:To assess the effects of these interventions on illness recovery-related outcomes (e.g., mood stability, functional improvement).

Keywords
Bipolar disorder; Adolescents; Sleep quality

Country
China
